(54) Title: DYNAMIC SIGNALING AND ROUTING

(57) Abstract: A method of setting parameters of a real time packet-based connection over a communication network. The method includes identifying, by a particular network element, a real-time packet based connection, selecting, by the particular network element, a value for at least one end-point parameter of the identified connection, and selecting, by the particular network element, a value for at least one network parameter of the identified connection.
